

Our Green Promise

The National Wine Centre of Australia is a public exhibition building about winemaking and its industry in Australia. It contains an interactive permanent exhibition of winemaking, on-site educational facilities, wine tourism information and a wine retail store.

The National Wine Centre of Australia recognises that all businesses have the potential to impact negatively on the environment, and as such, are committed to preventing pollution and reducing our impacts on the environment where possible.

Our Green Promise:

Through this commitment, our organisation has developed an Environment Management Program (EMP) aligned to the Bronze Level of Business SA's 'Green' Certification Scheme which helps us to:

- Actively manage and continually improve our environmental sustainability;
- Integrate the consideration of environmental concerns and impacts into our decision making and activities;
- Undertake our operations using minimum impact methodologies;
- Use the waste management hierarchy to improve our resource efficiency and reduce the total proportion of our waste sent to landfill;
- Control environmental hazards which may pose risks to the community, environment or property;
- Meet and where possible exceed environmental legislation, regulations and other requirements to which our organisation subscribes; and
- Obtain feedback on our businesses operations/management program, along with our environmental performance.

We will ensure that all employees, volunteers, visitors, clients, suppliers, contractors and sub-contractors are made aware of our environmental policy and of their own responsibilities via ongoing communication and education.

Employees and volunteers will also be encouraged at all levels to take ownership and responsibility for these initiatives through active participation and co-operation.

This environment policy will be displayed at all times and is openly available to all members of the public via our website.
